

# Hyojoon Kim

---

Joon Kim is an Associate Research Scholar in the Computer Science department at Princeton University. His current research focuses on building better network systems, applications, and tools with software-defined networking (SDN), programmable data planes, and P4. He is also enthusiastic about deploying such systems in a real network. To this end, he is also the Cyber Infrastructure Engineer in the IT department at Princeton University. His high-level goal is to make computer networks easier to monitor, understand, secure, and configure. He received his Ph.D. and Masters degree in Computer Science from Georgia Tech under the supervision of Dr. Nick Feamster and his Bachelor's degree in Computer Science from the University of Wisconsin-Madison. He did several research internships at HP Labs in Palo Alto, USA. He worked as a software engineer in South Korea before graduate school for several years.
